

Custom Table Top for Juki's TL-98P

The sturdy table top has an adjustable indented area for the machine that allows easy access to the knee lifter lever. The indented area also finishes perfectly with the TL-98P resulting in a vastly increased sewing area. Furthermore a cable port assists you in keeping the work area clear of wires while sewing.

NEW!

This light weight table top can be fitted with multiple leg or stand options depending on the users preference.

The stand that is pictured (ADJ.385) is only a suggestion and other foldable options could also be included for users short on space.

If you are interested in purchasing this table top please contact a sales representative from Juki Central Europe.
